EPA R5 VI Guidebook_Oct2010.pdf

Sure, here it is. I think the 2 guidances are consistent – the R5 guidance also says you are supposed to remediate the groundwater as the long-term solution, and SSDS is a short-term solution because it doesn't do that. But landfill gas collection systems don't remediate groundwater either, it's just another type of engineering system that diverts gas (except for methane, which if you flare the methane I think that's "treating" the gas, not just diverting it). But we could determine that it is a more effective and/or practicable system, or if there is a regulation requiring a landfill gas system, then I think we would have to find that SSDS don't meet that ARAR.

Hello Maddie/Leslie –

As discussed on yesterday's teleconference, we all agreed to setup an in-person meeting at the CH2M HILL Dayton office to discuss the strategy for moving the SDD project forward. CH2M HILL will email out to you both a suggested list of topics which we can then turn into an agenda. But in the meantime, we thought it best to secure the date of the meeting. We all discussed the week of May 19, not including Tuesday or Wednesday. Monday may not be best as Leslie would be traveling on a Sunday. Both Dave and I have meetings on Thursday, though could find time if needed.

Therefore we recommend Friday morning, May 23. Hopefully this would allow Leslie to travel Thursday afternoon and Friday afternoon and not over a weekend. Please let us know if this proposal works for you all.

Thank you.

Brett A. Fishwild

Associate Project Manager
